

To-Do App

Using React Native

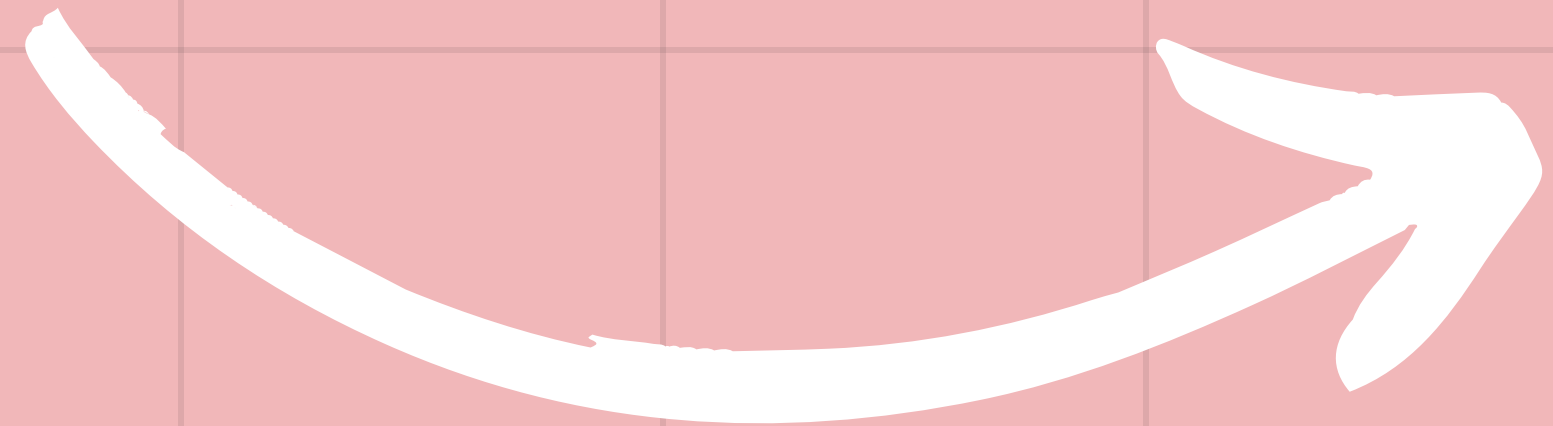

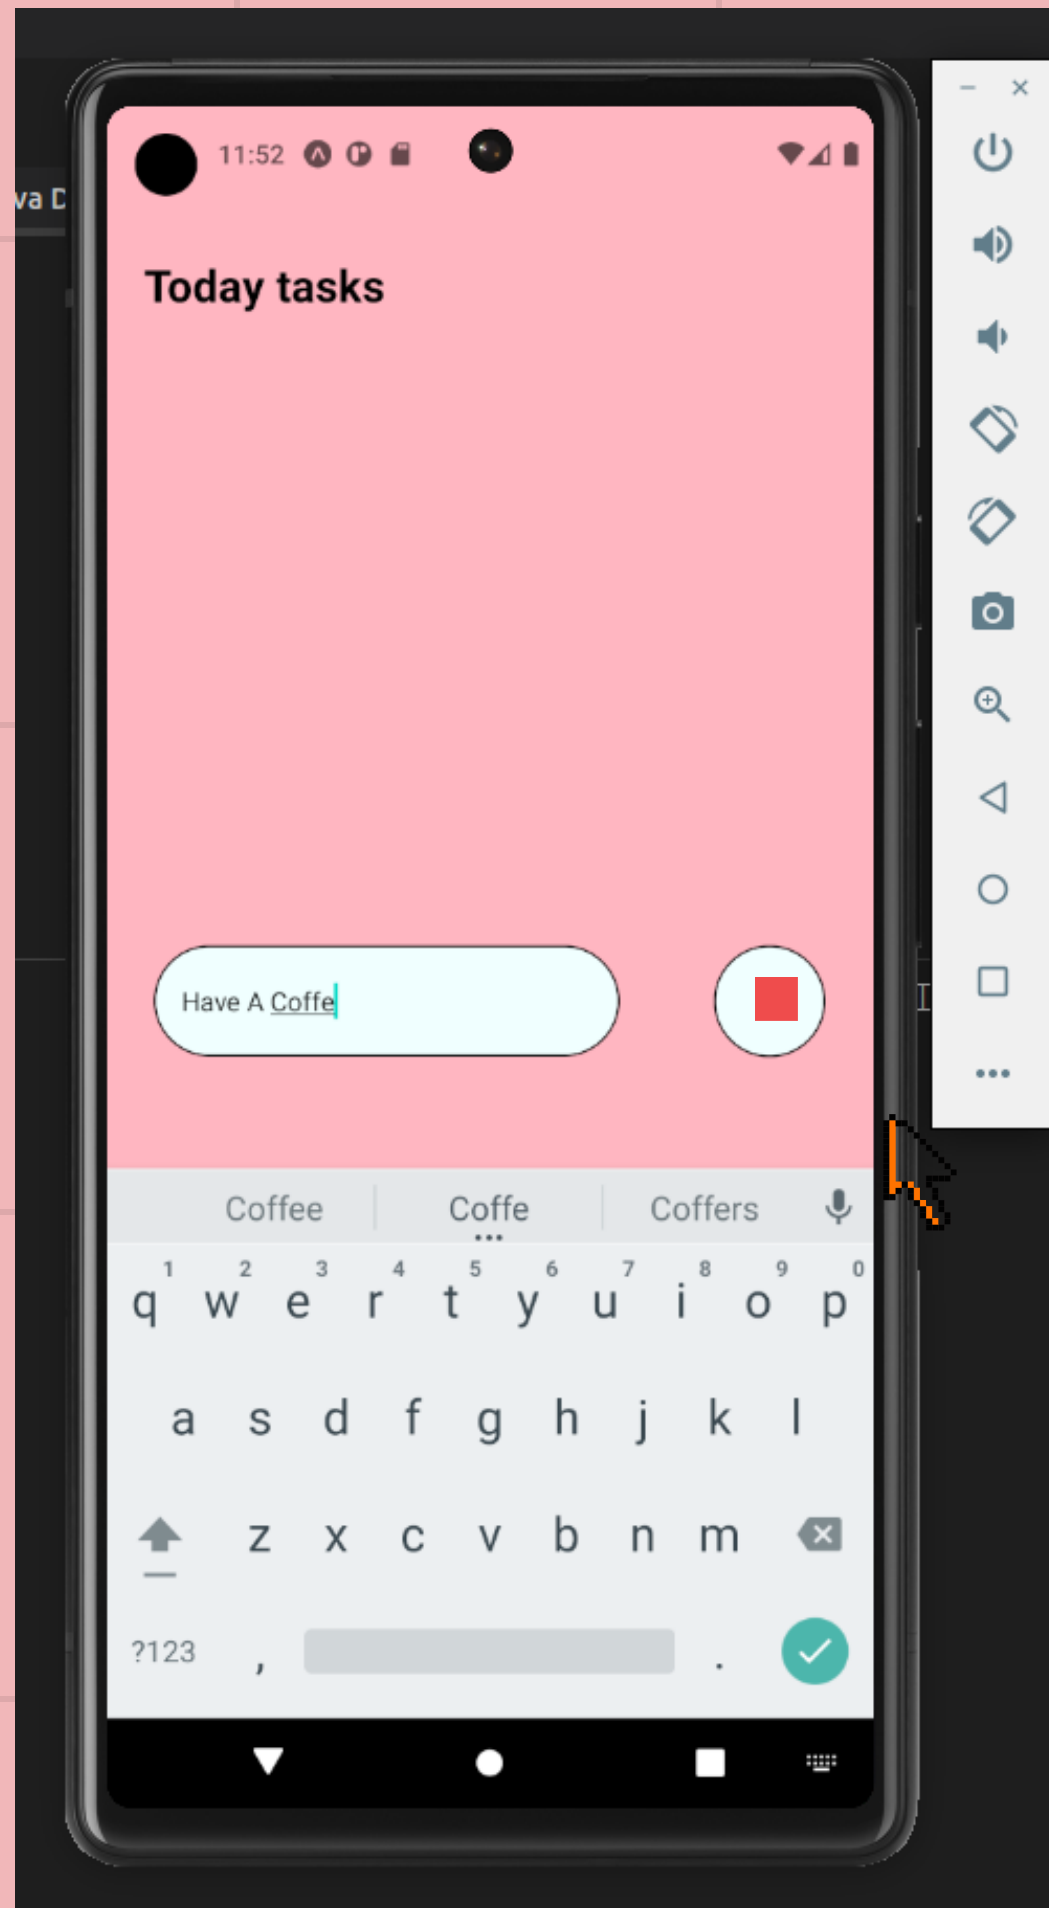

This is how the app looks for now

- You can add new task
- You can see all your tasks
- You can remove tasks that are done

**When u click on
-write a task-**

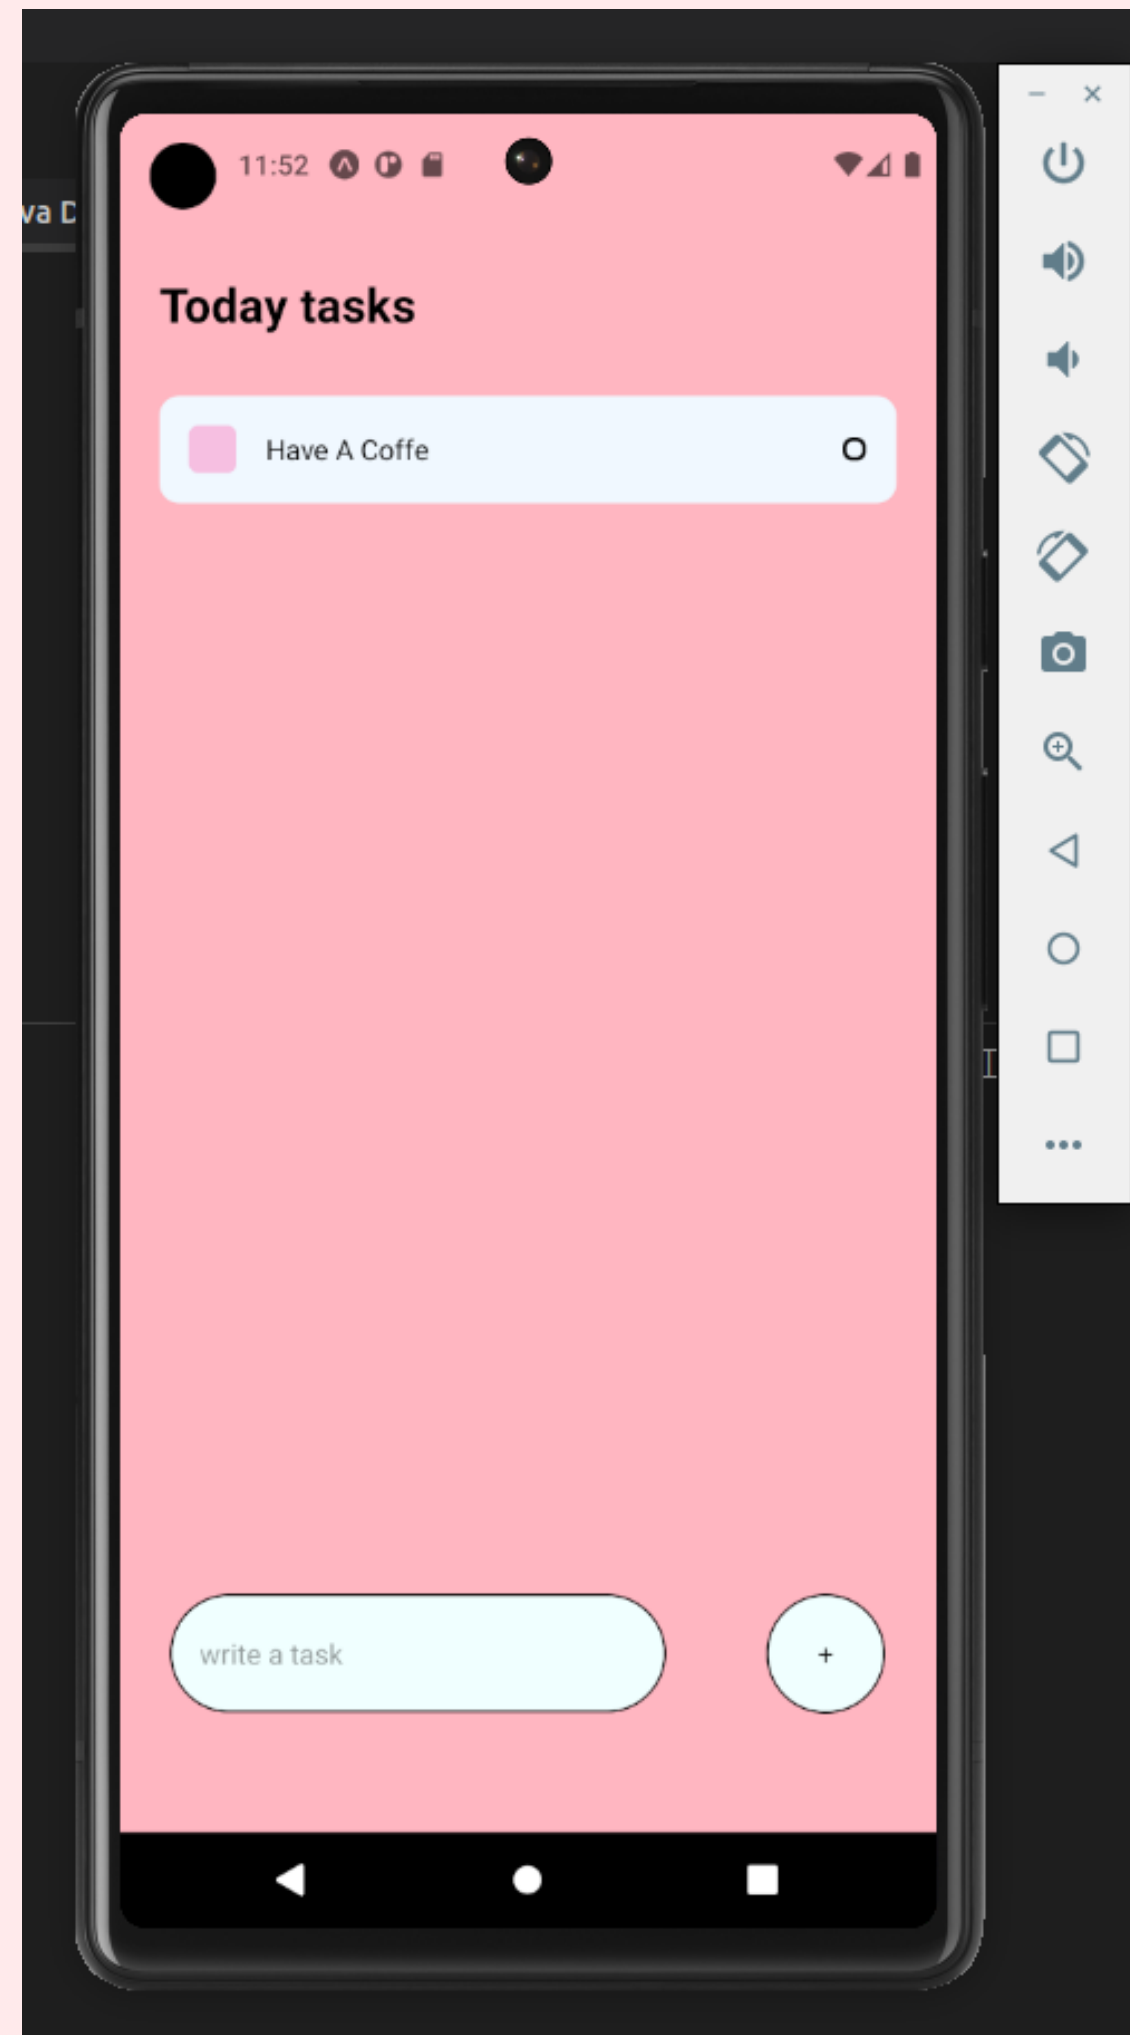

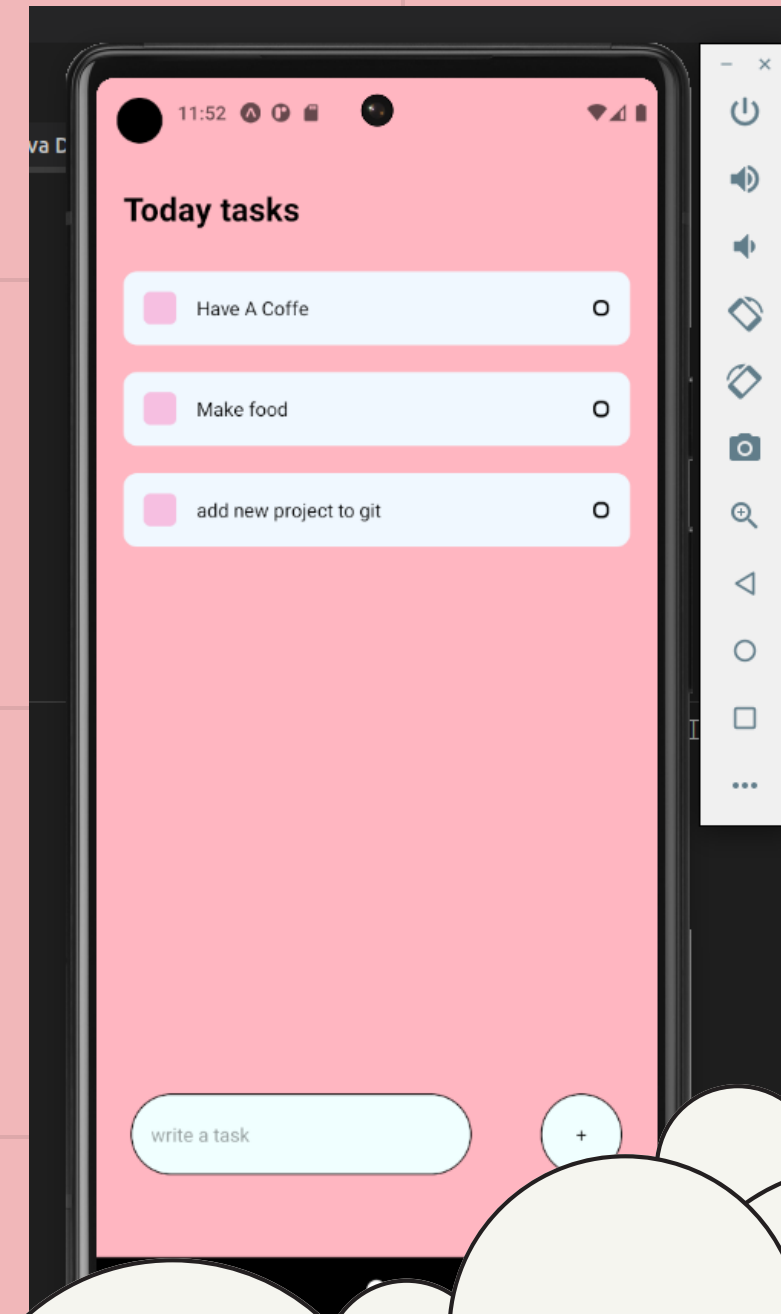

You can write your new task

- After you wrote it you can add it by clicking on + button

**Now you can see
all your tasks**

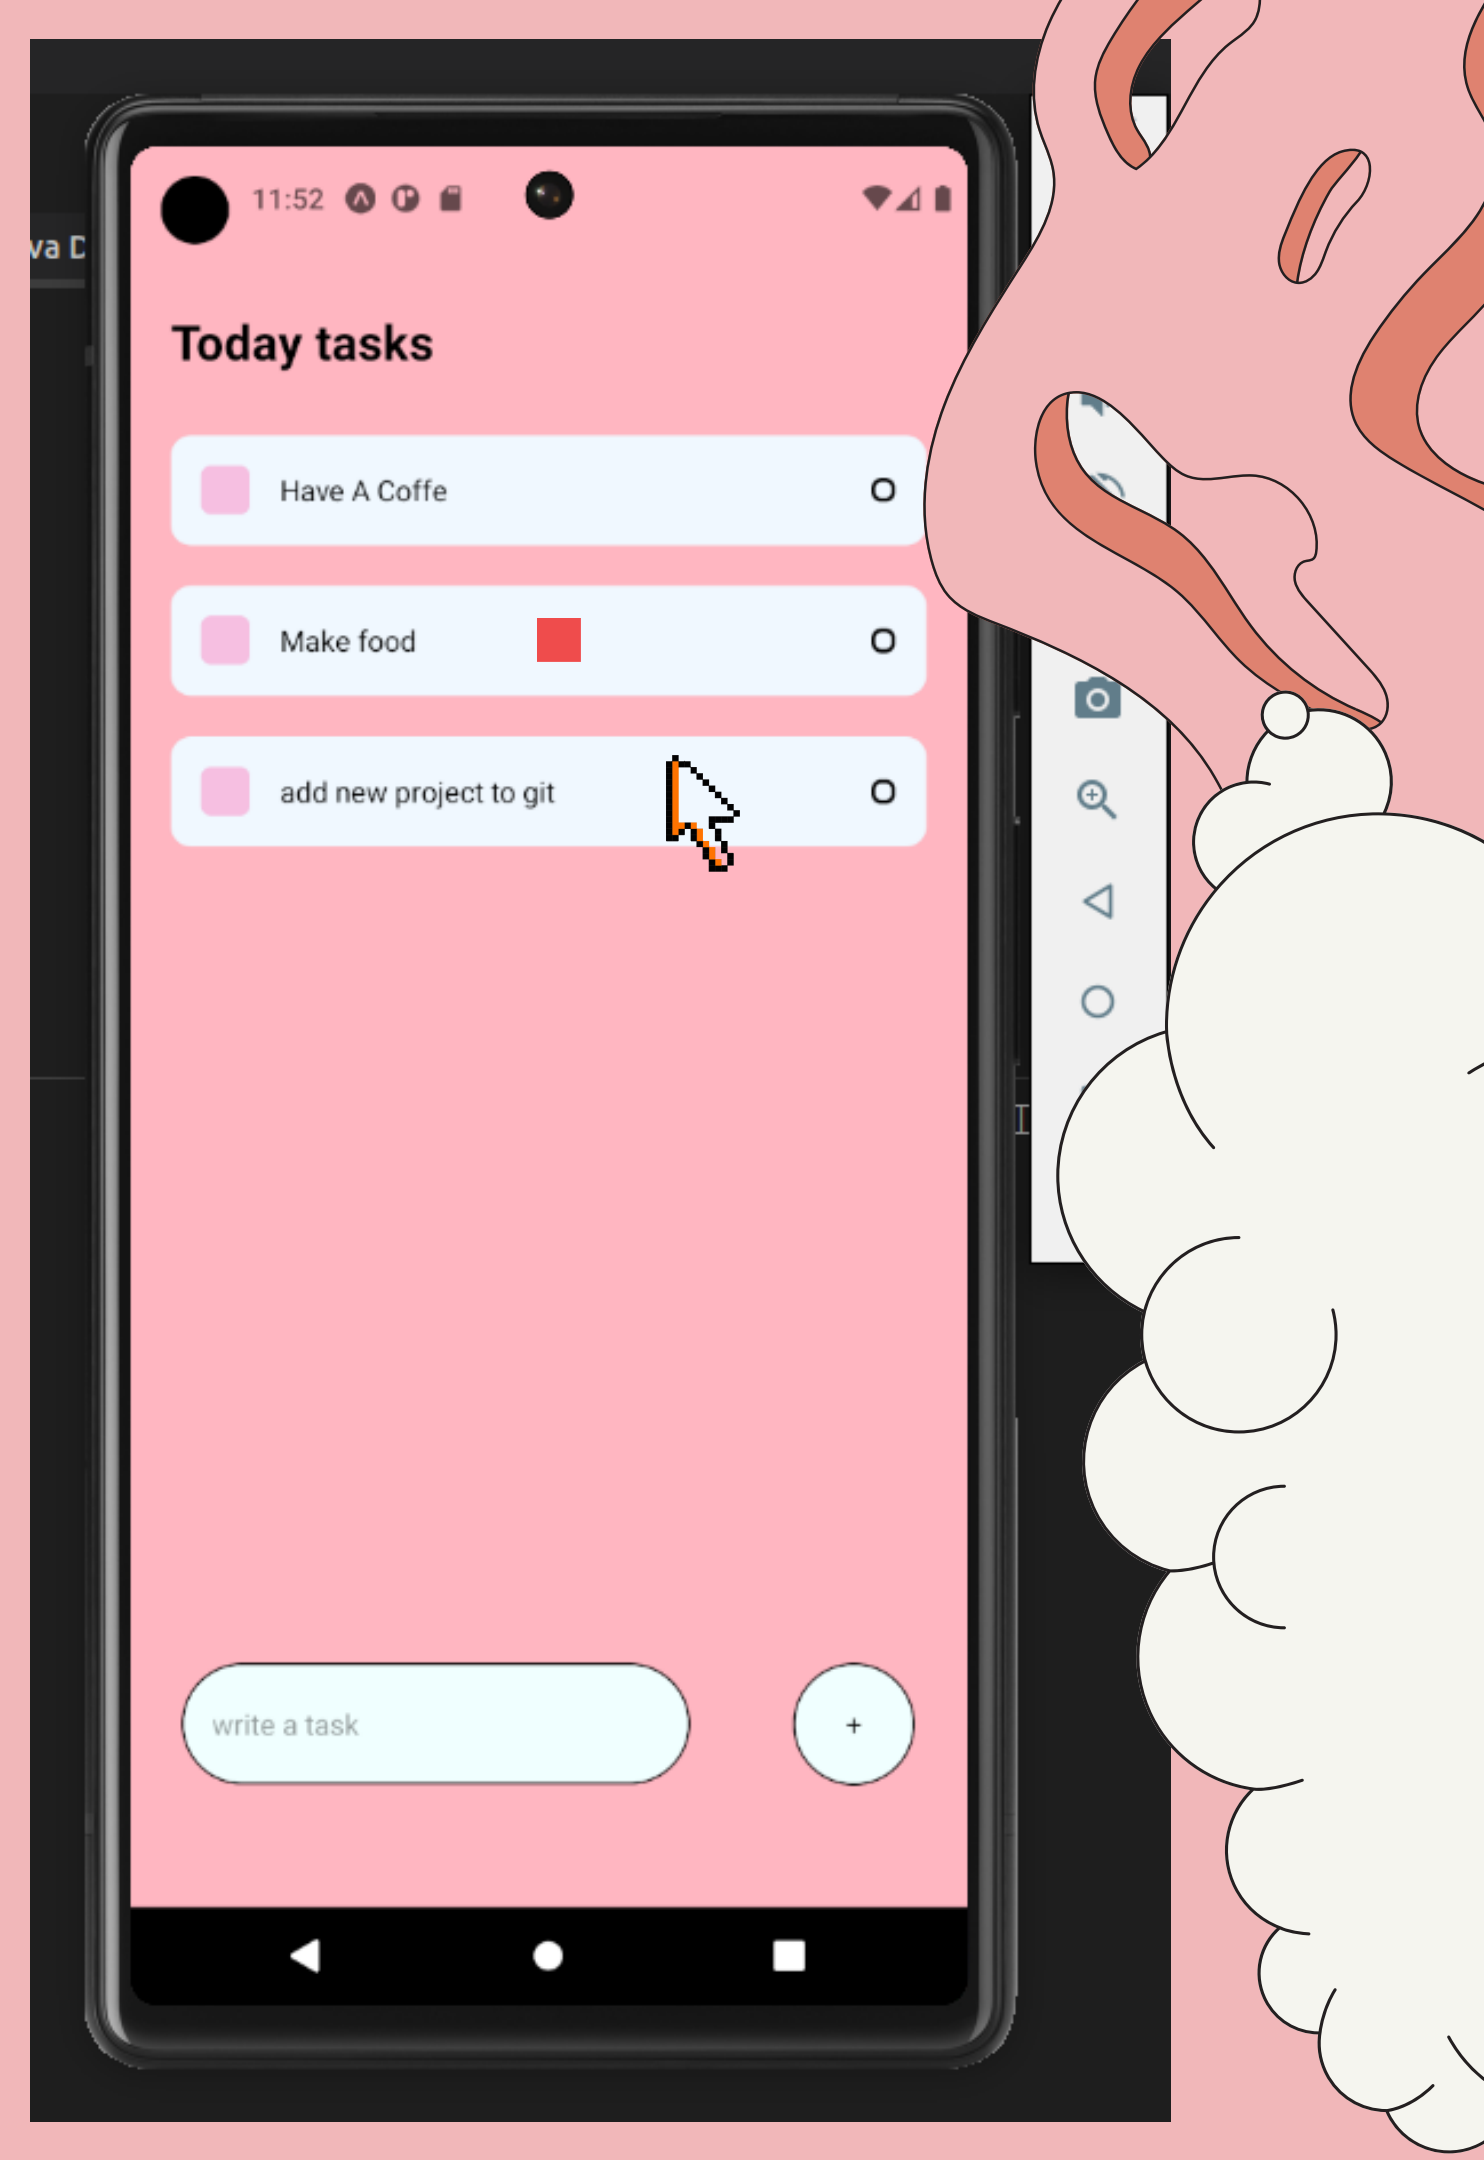

**When you are done
with your task**

Remove it

You can easily remove it by clicking on the task!

Remove it

You can easily remove it by clicking on the task!

What is used

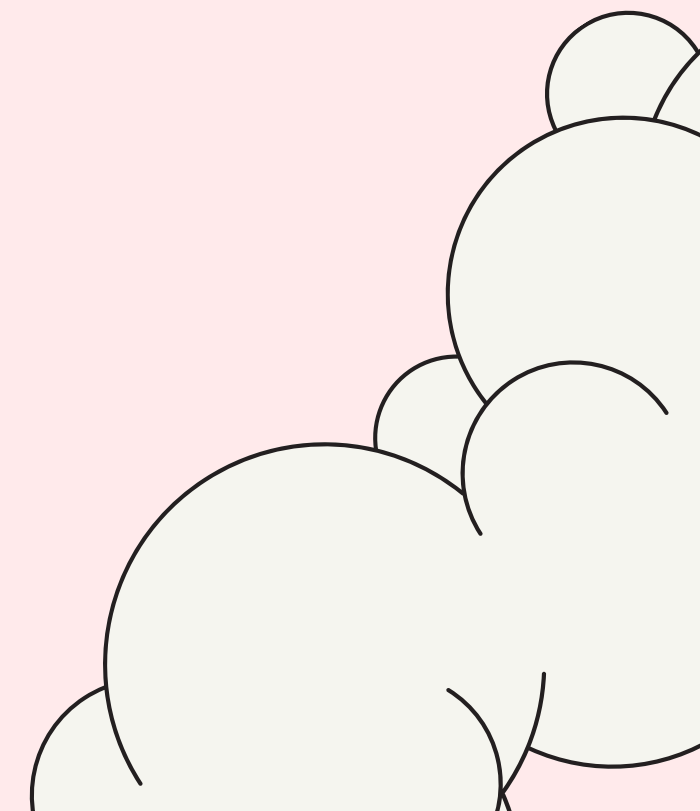

This simple app is written in
react native.

For now the data is stored in
local storage.

UPGRADE?!

In the future I would like to connect this app to firebase.

I would like to add more features like different users, push notifications, sort and search bar.

Keep it positive.
